

Widget Root Problems

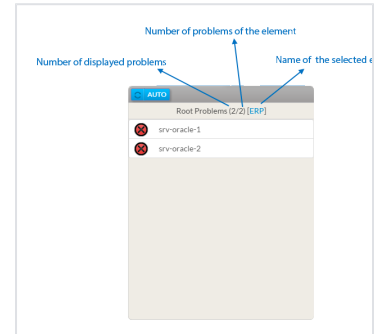

Description

This widget displays the list of the Root Problems linked to an element.

- The widget title bar indicates:
 - the number of displayed problems.
 - the number of problems of the element.
 - the name of the reference element
- In the list of root problems, each line displays:
 - Status and context
 - The name of the element

In the exemple, 2 hosts are the roots problems of the ERP status.

- So first select the ERP via the configuration window
- All elements that prevent the ERP to run correctly will then will be displayed.

Usage

Opening the detail view of one of the root problem

Clicking on a line will open the detail panel (see [Host Detail Panel chapter](#))

Configuration

1. Select a host or cluster name in the first list.
 - The total number of hosts and clusters will be displayed near "Select Host/Cluster" **(1)**.
 - If no host selected yet, the list of available hosts will automatically opened.
 - You can search (filter) for a host name, typing into the input on top of the list.
 - You can clean the current selection by clicking on the swipe icon **(2)**.
2. Once your element is selected, if you want to monitor a specific check, you just have to select check name inside the second list.
3. You can set the maximum number of elements displayed in the list **(3)**.
4. When configured, press the SUBMIT button **(4)**.
