

Module MongoDB

Overview	
Host group usage is very useful in many ways :	
<ul style="list-style-type: none">• let Administrators to organize and order hosts by type, data centers, applications, family etc.• let Administrators the ability to apply common properties like the Realm	
You can access to the Host groups configuration by using the link in the main menu.	? Unknown Attachment

The main page of Hostgroups Configuration is composed of a table, listing all existing Hostgroups.	? Unknown Attachment
This table contains the following informations :	
<ul style="list-style-type: none">• Differences• Name of the hostgroup• Members of the hostgroup• Status of the hostgroup (Enabled or Disabled)	
A tool bar on top of the table, gives administrators the ability to do the following :	
<ul style="list-style-type: none">• Enable, Disable, Delete or Duplicate selected Hostgroups• Filter List by Name• Filter List by Template applied on Hostgroups	
Like other configuration element pages, an action menu is displayed on the left.	? Unknown Attachment
This Menu provides following operations :	
<ul style="list-style-type: none">• Add en new Hostgroup• Show hostgroup detected by automatic modules• Accept differencies on selected elements	

Create a new hostgroup

To create a new Host Group, use the button "Add new [Hostgroup]" located in the Action Menu.	? Unknown Attachment
--	----------------------

Delete a Hostgroup

To delete a hostgroup, you can use the form of the host, or delete it directly from the list page.

<p>From the Form page</p> <p>First go to the Hostgroups page, from the Main menu, then click on the hostgroup name you want to delete.</p> <p>Once in the page displaying the form, click on the Delete button available on the left menu.</p> <p>A confirmation popup will be displayed.</p>	
<p>From the Main page</p> <p>First go to the Hostgroups page, from the Main menu, then click on the check box placed on the first column of the table.</p> <p>Use the Action menu on the top to select Delete, and click to the Launch Button.</p> <p>A confirmation popup will be displayed.</p>	<p>? Unknown Attachment</p> <p>? Unknown Attachment</p>

Duplicate a Hostgroup

Duplication operation is very useful when similar Hostgroups must be added.

<p>To duplicate a hostgroup, first go on the Main page listing all hostgroups, then select a hostgroup by clicking on the check box placed on the first column.</p>	<p>? Unknown Attachment</p>
<p>Once selected, the hostgroup can be duplicated by selecting Duplicate in the select Action of the tool bar. Duplication is executed by clicking the Launch button.</p>	<p>? Unknown Attachment</p>

Using the Main page gives Administrators ability to **Duplicate** many Hostgroups at once.

All properties are kept when duplicating operation, as well as Members.

Duplicated Hostgroups are totally detached and independant of the cloned Hostgroup. No relation is made in the configuration.
