

Lists

Go to a List

- You can access the list in the navigation bar.

- Access to a list is also possible via the [EN - Favourites panel](#) ([The management of its views](#))

Attention, Attention, the menu "New list" is not displayed if the user does not have the right to write into its **Private** space. (cf [EN - User rights on bookmark sharing](#))

Concepts

The menu provides 2 predefined lists :

- All items:**

The list shows all the Hosts, Clusters and Checks you have access to.

- Source Problems:**

The list presents all the elements that are the source of a problem, either for them or for several pieces of equipment.

For example: *if a check is critical but its host doesn't respond, only the host will appear in this list, as it is at least the reason why the check is critical.*

Overview

Visually, the list is divided into 5 areas:

- Header area**
 - It contains the list name, mass actions, refresh management buttons, CSV export of the list, and the quick filter.
- List Sorting and Setting area**
 - The sort field is used to sort the items in the list.
 - The toothed wheel will allow you to access the list settings (choice of columns, display of rows).
- Advanced Filters Area**
 - You will be able to define combined filters between each column,
 - and add filter lines for more selective lists.
- Items Area**
 - The listing of all the elements corresponding to the filters and sorted by column.
- Pagination Area**
 - Allows you to choose the number of items per page and to move from page to page.
