

List Sorting and Setting area

Description

Show or hide all checks in the list

- Click on the icon  to display all the checks in the list.
- Click on the icon  to hide all the checks on the list. (Gathering)

Select or deselect all items

- Click on the icon  pour **sélectionner** tous les éléments.
- Click on the icon  to **deselect** all items.

Sort a column

- Click on the column header to sort in ascending order.
- Click again to sort in descending order.
- Click again to remove the sort.

Multiple sorts

The combination of the shift **key + click** on the column headers activates multiple sorting. Once activated on a column, multiple sorting is recognizable by the blue color on the column name.

The number represents the sorting priority order. This order is final in function of the column selection order.

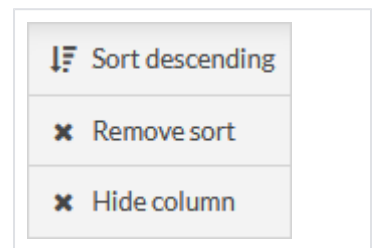

To make a sort modification on a column, you have to **shift + click** on the header of the column that needs to be modified.

To delete a multiple sort you must:

- Either delete all sorts contained in the multiple sort,
- or do a simple sort on a column.

See possible actions on a column

- Click on the icon  column to display the possible actions on the:
 - Ascending sort.
 - Descending Sorting.
 - Delete the sorting (only appears if a sorting is performed on the column).
 - Hide the column.

Adjust columns size

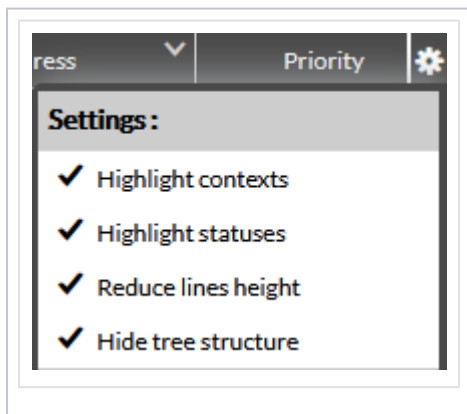

- a. Move the mouse between two columns to bring up this symbol
- b. Click and drag the mouse to change the column size..

Settings

Changing the list settings

- a. Click on the button  to access the different possible settings in the list.

- b. you can :

- i. Highlight the contexts (the lines will take the colour of the contexts)
- ii. Highlight the statuses (the lines will take the color of the statuses)
- iii. Reduce line height (for a compact display)
 - The lines are then all the same height
 - You will be able to use the shortcut **W + click** on a line to increase the line to the necessary size or reduce it. This will allow you for example to see a check result that is a bit long..
- iv. Hide the check tree
 - Provide the possibility to filter the list on hosts, clusters and checks without taking into account the tree structure..
 - **Example:** Filter the list to display only checks.

Here are 2 screenshots to illustrate:

- Contexte and status are highlighthed
- On the left, the check tree is displayed
- On the right, the check tree is hidden

Remarques

The highlighting of contexts takes precedence over statuts.

With the tree structure

Without the tree structure

Choose the displayed columns

- Click on the button  to display, under the settings section, the list of displayed and deactivated columns.
- Click on the name of the column to show or hide it.

Colonnes	Description
Contexte	See the page EN - Concept: Status & Context .
Statut	See the page EN - Concept: Status & Context .
Type	The element type.
Nom (Hôte /Cluster)	The name of the host or cluster.
Nom de check	The name of the Check.
Description	Description of the host that will be displayed in the web interfaces.
Adresse	The address of the element, usually an IP address or a domain name.
Priorité	The importance of the finished element in the Shinken Enterprise configuration is represented by stars and dollars (from one star to 6 dollars), 6 dollars is the maximum priority.
Royaume	The realm to which the element belongs.
Résultat	The result of the last verification performed on the element.
Résultat Long	Additional information from the last verification performed on the element.
Modèles d'Hôtes/de Cluster	The model(s) of host(s) or cluster(s) applied to the element.
Groupes d'Hôtes/de Cluster	The Host Group(s) or Cluster(s) to which the element belongs.
Groupes de Contacts	The shortened name of the Contact Group(s) that should be notified when a problem (or resolution) appears in the element.
Contacts	The shortened name(s) of the Contact(s) to be notified when a problem or resolution appears on the element.
Statut depuis	Date indicating how long the element has been in this state.

Dernière vérification	Date of last status check of the element.
Prochaine vérification	Date of the next status check of the element.
Confirmation de Statut	Maybe "true" or "false". If the number of attempts made is sufficient to confirm the state of the element, the value is "true".
Tentatives	Useful only if the element is in the SOFT state. Indicates how many checks can potentially be run before the state goes into the "Hard" state.
URL externe	The column shows as many buttons as defined in the multi_url field of the element in the configuration.
