

Overview

This view contains all data for an element (Host or Cluster).

The view is splitted in two zones :

- HUD : Identification and State Summary of the host
- TABS : each tab is dedicated to a specific concept.
 - Summary : overview on all the other tabs.
 - Manage : main actions for this element.
 - Checks : the list of checks attached to this element.

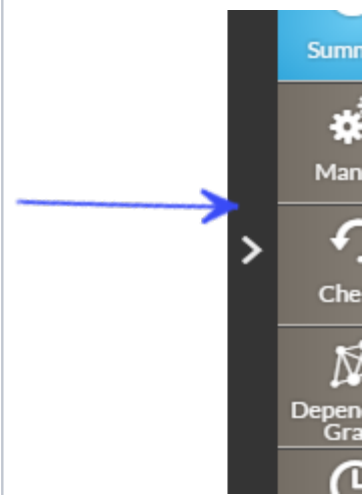

The screenshot shows a monitoring dashboard for a host named "HOST [Shinken]". The top section (HUD) displays the host's name, description ("Shinken"), IP address ("127.0.0.1"), and status ("Flapping"). It also shows the last check time ("42second ago") and the next active check time ("in 4minute 17second"). Below the HUD, there is a sidebar with navigation tabs: Summary, Manage, Checks, Dependency Graph, Historic, and Graphics. The main content area shows the "Output" section with a "PING OK - Packet loss = 0%, RTA = 0.01 ms" message, and a "Checks: 13" section with a status summary: Critical (1), Warning (0), Unknown (1), and OK (11). The "Host templates" section shows a "Shinken Template".

- Historic : a day by day historic of statuses and context changes of the element.
- Graphics : A more powerful view of metrics than the [Wid gets Graphs](#) as you overlap multiple metrics in the same graph.

Note: Cluster can have checks so Checks and Graphics tabs won't be available if the view is opened for a cluster.

Collapse the panel

- You can hide the panel by clicking on the left side bar of the detailed view.

Resize the panel

- On the top left corner of the pannel, click on the resize area and drag it to the left or the right.
- if you reach the maximum size, the background of the resize area will become red.
