## Concept

L'ensemble des éléments disponibles sont identifiés via les uuids des objets. Ces uuids sont utilisées pour construire les différentes vues de l'interface.

Ex: accès a une hive particulière "http:// **URL** /static/ui/index.html#/hive/b4bb2ac6-ead4-f86f-d1e5-366d3fa6e0af"

- pour récupérer la liste des uuids des hosts :

## Glossaire

**nom\_du\_site** : adresse http de votre serveur

**uuid** : identifiant unique d'un élément

**nom\_du\_host** : Nom d'un host

**nom\_du\_check**: Nom d'un check

**uuid\_du\_host**: uuid d'un host

**uuid\_du\_check** : uuid d'un check

**nom\_de\_l'\_élément** : le nom d'un hôte ou d'un cluster
