

Here are the corrections in this release:

Bugs

Visualization UI

List All	The display of checks and hosts output was limited to 100 characters. This limit is removed.
Host detail panel	The text "Error: in the past" is displayed when the next check is planned in the past (occurs when scheduler workload is too high)
Host template linux	The penguin icon was missing on the host template "linux"

Configuration UI

No Access to UI	In some case, the update from V02.03.01 might prevent users to access to the Configuration UI, due to wrong characters mapping.
-----------------	---

Installation

Updating Shinken	The metrology server was stopped during the update but not restarted on a shinken start
