

Here are corrections in this release:

Bugs

Visualization UI

Liste ALL	In the left panel containing the Advanced filtering: In additional filter selector, "tag" is displayed but must be "host template" and "son of" become "link to".
-----------	---

Configuration UI

Duplicate an element	An element copy create a new one with parenthesis inside => "host1 (copy 1)". As "(" is a illegal character, elements are not duplicate with "[" => "host1 [copy 1]"
Source VMWare	If the module sync-vmware.cfg file was not configured, the state of the source in the home page was Ok. Now it is set to Warning => "Warning: The VMWare import module is not configured (sync-vmware.cfg)".
Source Discovery	Hosts were detected but not all weren't proposed as new in the UI. If many host was having the same last template, only one was count and displayed.
Flat file Import	Having a "use" property in a time period is not allowed but writing it in Shinken or a Nagios file crash the Arbiter.

Installation

VMWare SDK	Le VMWare SDK 5.1 is replaced by the 5.5 in the Installation package.
