

Configuring and administrate a monitoring tool need some basic knowledge in the monitoring logic. In this documentation part, you will find both basic and advanced monitoring logics that will help you to understand how to setup and administrate your monitoring setup.

Who need basic and advanced monitoring

Basic monitoring

Basic monitoring is designed to be able to declare the user hosts, link the valid host templates and contacts. All administrators that will add hosts in the system need to read and understand the basic monitoring logic.

Advanced monitoring

Advanced monitoring is designed to be able to filter large and heterogeneous environments. Only monitoring administrators must read this part of the documentation. They will be able to build a template system that the other administrators that will be able to use without knowing monitoring implementation details.
